Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 December 2003.

Non-Final Official Action

Status of the Claims

Claims 1-5 and 7-15 are rejected under 35 USC §102.

Claim 6 is rejected under 35 USC §103.

Rejections under 35 USC §102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 7-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Forman (United States Patent Application Publication No. 2002/0162056 A1).

As per the claims, Forman discloses:

1. A method for pre-searching error solutions, comprising:

 parsing a customer-generated error report to extract a plurality of keywords
(¶34);

 assembling a query using the attributes and the keywords as selection criteria
(¶34);

 submitting the query to a software solution database (¶39);

Art Unit: 2113

collecting solutions returned from the software solution database in response to the submitted query (§32);

sorting the collected solutions based on a sort preference (§34); and

formatting the sorted solutions for display (§32).

2. The method of claim 1, wherein said error report is received over a network from a customer (§31).

3. The method of claim 1, wherein said error report includes a plurality of software component attributes (§31).

4. The method of claim 1, wherein the error report contains an error summary field that is parsed to extract the plurality of keywords (§33).

5. The method of claim 1, wherein the sort preference is the number of keywords found in each solution (§34).

7. The method of claim 1, wherein the query is directed to a message table and a notes table within the software solution database (§36/§38).

8. The method of claim 7, wherein the solutions comprise messages obtained from the message table and notes obtained from the notes table (§36/§38).

Claims 9-12 are the machine readable medium implementation of the Method of claims 1, 4, 5 and 8. As such, these claims are rejected in the same matter.

Claims 13-15 are the computer system of method claims 1, 2 and 3. As such, these claims are rejected in the same matter.

Rejections under 35 USC §103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Forman.

Forman does not explicitly disclose:

wherein the sort preference is a popularity value of each solution, said popularity value indicating number of times a solution has been returned from the software solution database.

Forman does disclose the sorting and ranking of results in a multitude of ways, from number of hits to historical probability of success. Clearly, Forman is not limited

Art Unit: 2113

and further is open to improvement by using alternative sorting preferences. Official Notice is given that it is notoriously well known to rank "hits" in a search engine by the number of times the "hit" has been returned. This is often used in commercial search query system to allow the user to more quickly find information they desire, by presenting information the "average" user desires. Thus it would have been obvious to one of ordinary skill in the art at the time of invention, to implement well popularity ranking systems into the solution search results display of Forman thus creating user experience which potentially displays a correct more quickly.
